

OPENTOFU FOR OPENBAO

Every CLI step from N° 1, 2, 4 and 5 as code – importing what exists, and what deliberately stays out of Tofu.

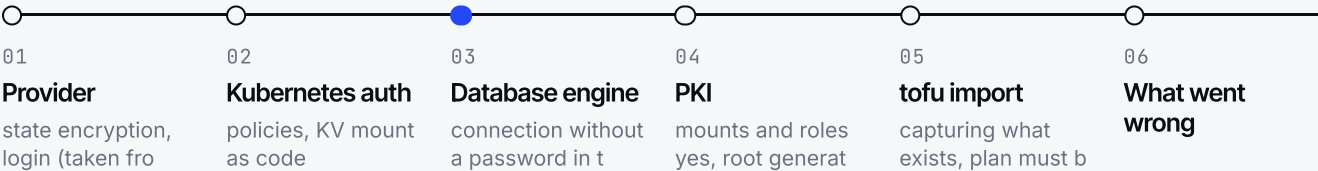

Every CLI step from N° 1, 2, 4 and 5 as code: auth methods, roles, policies, engines – with encrypted state, importing what exists, and what deliberately stays out of Tofu

This guide is in progress. Planned: Provider, state encryption, login (taken from N° 3); Kubernetes auth, policies, KV mount as code; Database engine: connection without a password in the state; PKI: mounts and roles yes, root generation no; tofu import: capturing what exists, plan must be empty; What went wrong; Operation: drift, rotation, what stays manual.

Prerequisites: admin login on the cluster OpenBao (N° 1, Part VI carried out).

-- draft

Published once everything has been run on the cluster.
