

KEYCLOAK AND OPENBAO

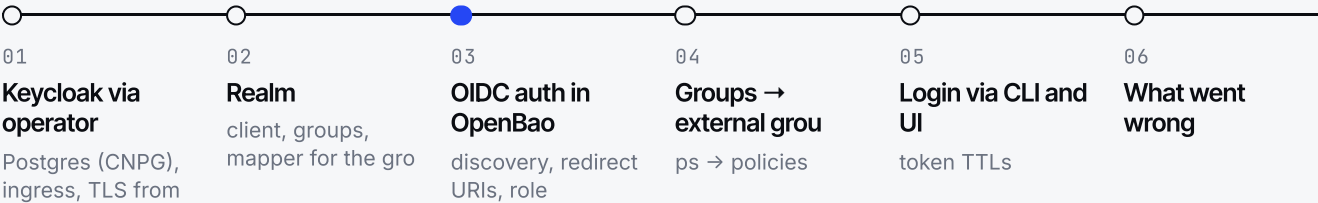

Keycloak in the cluster, OIDC login for OpenBao, groups
→ policies – admin access without a password in
OpenBao.

Deploying Keycloak in the cluster, a realm with groups, OIDC login for OpenBao – and groups that become policies instead of passwords that live in OpenBao

This guide is in progress. Planned: Keycloak via operator: Postgres (CNPG), ingress, TLS from N° 5; Realm, client, groups, mapper for the groups claim; OIDC auth in OpenBao: discovery, redirect URIs, role; Groups → external groups → policies; Login via CLI and UI, token TTLs; What went wrong; Operation: break glass without Keycloak, retiring userpass.

Prerequisites: ingress hostname for Keycloak and the OIDC redirect, a browser.

-- draft
Published once everything has been run on the cluster.
